

## FutureChem® OABH

### Product Stewardship Summary

#### Chemical Identification

- Chemical Abstract Service (CAS) Number: 6629-10-3
- Chemical Name: oxalyl bis(benzylidenehydrazide)

#### Description of FutureChem® OABH

FutureChem® OABH is a white, free flowing powder with excellent chelation properties for copper cations. FutureChem® OABH is packaged by FutureFuel Chemical Company in 25 kg fiber drums.

#### Properties of FutureChem® OABH

- White Solid
- Melting Point >300°C
- Essentially Odorless

#### Safety & Health Information of FutureChem® OABH

Normal safe handling procedures should be used in the workplace. Workers should follow recommendations of Safety Data Sheets (SDS). Consumers are at little risk of being exposed to FutureChem® OABH under normal conditions of use. The following describes health effects from exposure to FutureChem® OABH.

- Skin Contact: No adverse effects due to skin contact are expected
- Eye Contact: May cause temporary irritation
- Inhalation: No adverse effects due to inhalation are expected
- Ingestion: Expected to be a low ingestion hazard

FutureChem® OABH is not classified as environmentally hazardous. It is insoluble or slightly soluble in water.
